Wind-lock Introduces PL Access Doors

Leesport, PA – Wind-lock has expanded its access door product line by adding PL Access Doors – an access door composed of high-impact, styrene plastic.

“We saw a need for a less expensive, time-saving option for access panels and wanted to make it available for our customers looking for this type of solution,” explained Tara Loftus, National Product Manager for Wind-lock.

The Wind-lock PL Access Door is designed to provide easy access to walls and ceilings with no mechanical fastening. It is installed by applying caulking adhesive or construction adhesive to the back of the frame and then pressing it firmly into place.

The PL door is hinged and constructed with U.V. stabilizers to prevent fading or corrosion. The white textured finish allows it to be left as is or painted to match the surrounding areas.

-MORE-

It fits flush to the frame with rounded safety corners, and the snap style latches allow the door to fit tightly within the frame. The access door is available in a variety of sizes ranging from 4" x 6" to 14" x 29", including the popular new 12" x 12" size.

Information on this product can be found on the Wind-lock web site at www.wind-lock.com or by calling Wind-lock at 800-872-5625.

Wind-lock markets a wide variety of products used in the residential and commercial building construction markets, with particular emphasis on the EIFS, ICF, SIP, Stone Veneer and Stucco construction methods. Wind-lock has been servicing the construction industry for more than 25 years, starting with tools and accessories for the EIFS industry. The company has grown to serve many segments of the construction industry and ships its products nationally and internationally from five warehouses located across the country.
